Product Description

Dear Mercedes drivers,

of time, I regret to point out some of my projects, so far as it comes here to enjoy a super-rare and original Brabus autothermal Tempamatic offer.

This is a combination of external temperature gauge and oil temperature display and is mounted in the instrument cluster instead of the used Mercedes outside temperature display.

Brabus has made this announcement of his time hand-finished in a small series.

About the included switch you can switch at will between the two temperatures and forth. The two LED's to show you this, what value is currently displayed.

I really wanted to use the display in my E320T, but I miss it just the time and I have to concentrate on the more essential.

The display has a new backlight and LEDs (green & yellow) were renewed and the brightness set so that they do not dazzle the driver.

The display has no "pixel failure" and shows the values over the entire temperature range of error-free. The plus symbol (+) glows unfortunately very easy permanently, you can see that but only if you look closely.

The sensor cable for the sensor-Möller, I can block new plugs (the same phone jack was installed as original). The sensors are unfortunately missing, but it should not be difficult to raise them. The VDO No. of presumably suitable Mülgebers I have received already. Furthermore, I have determined the characteristics of the sensors and transmitted to a Excell file, this can be sent upon request after the auction by e-mail.

Also up for auction include the installation manual, the schematic / wiring diagram and technical data.

Shipping usually takes place. on the day of receipt of payment, shipping status is updated in the short term on ebay.

The sale is direct from the hobbyist, therefore, no guarantee or warranty.

Return within a week, in a comprehensible reason (ie not in "habs I changed my mind" ... etc).

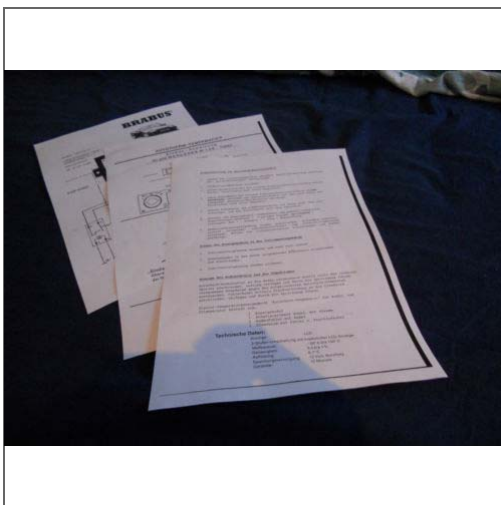

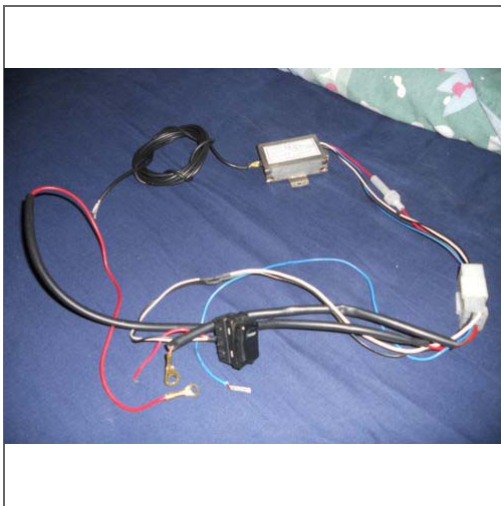

And now I hope you enjoy!

Ps: also look again at my other auctions.
